of the dog's skin

INNOCUITY evaluated
under veterinary control

LEAVE-ON lotion,
easy of use

* Superficial epidermal layers

EffiSkin® lotion is a purifying hygiene product adapted to pyoderma prone skins developed based on human dermo-cosmetic standards for demanding vets and dog owners

Naturally active ingredients

Extract of 16 plants with purifying properties: Synherbs®16P926

Synherbs®16P926 (patent pending), an EffiSkin® exclusivity, has been elaborated scientifically using **Artificial Intelligence**. It allowed **for the first time** to discover purifying synergies among many billion **edible plant mixes** possibilities. This 100% natural active is obtained using processes **without chemical solvents and is extremely environmental friendly**. Associated to a natural thickener, Synherbs®16P926 creates a favorable environment on the dog's skin so that **persistent irritation sources can be resolved efficiently and naturally**.

Restructuring* & moisturizing* agent: Aquaxyl™

Composed of 4 sugars, this active **regulates the skin's hydric flow** by optimizing water reserves and by limiting water losses. It acts as a anti-dehydration shield by strengthening the synthesis of essential lipids and proteins implicated in the **structuring of the the skin's corneal layer**. This active is 100% natural (patent owned by Seppic).

**Superficial epidermal layers.*

Moisturizing* agent: vegetal glycerin

The vegetable glycerin contained in EffiSkin® combines emollient, humectant and occlusive qualities. They act together to **improve skin hydration** and **palliate the functions of the natural lipids** of the skin when these are defective. This ingredient is 100% natural.

**Superficial epidermal layers.*

EffiSkin

Directions for use

Shake well before use. Spray EffiSkin® directly on the skin area presenting pyoderma clinical signs, 1 to 2 times a day, until aspect improvement.

Composition

Aqua, Glycerin, Synherbs®16P926 (extracted from *Arbutus unedo*, *Arctostaphylos uva-ursi*, *Camellia sinensis*, *Combretum micranthum*, *Eugenia caryophyllus*, *Foeniculum vulgare*, *Fucus vesiculosus*, *Juniperus communis*, *Lippia citriodora*, *Rheum palmatum*, *Rosmarinus officinalis*, *Satureja montana*, *Spiraea ulmaria*, *Tanacetum parthenium*, *Valeriana officinalis*, *Vitis vinifera*), Xylitylglucoside, Benzyl alcohol, Anhydroxylitol, Disodium phosphate, Xylitol, Xanthan gum, Ethylhexylglycerin, Glucose, Tocopherol.

Precautions

Veterinary use only. External use only. Do not swallow, avoid eyes contact, keep out of reach of children.

Early adopters testify:

Results are readily observed, even after antibiotic and chlorhexidine based treatments turned out to be inefficient

Eddy, an adorable 5 years old Golden Retriever wasn't recovering from irritation ignited by fleas despite the use of antibiotics and biocide containing shampoos. But when Effiskin® lotion was applied mornings and evenings, its skin recovered a healthy aspect in just 4 days!

Before Effiskin® application

After 4 days Effiskin® application
